OFFICE OF THE DIRECTOR OF PUBLIC HEALTH
IN MYSORE
BANGALORE.

Date 15th March 1943

To

The Secretary to Government,
Local Self Government,
Bangalore

Sir

Providing an elevated tank of one lakh gallons capacity for Tiptur Town (representation made by several Municipalities to H.H. during his tour in Tumkur, Chitaldrug and other Districts

In continuation of this office letter No C 172-64 dated 2nd March 1943 forwarding statement showing the stage of the works relating to this Department are, in respect of promises made by His Highness the Maharaja on his tour of July 1942, I have the honour to state that the Tiptur Municipal Council in their address presented to His Highness have stressed for the improvement of the water supply arrangements to the town by the construction of an overhead tank of lakh of gallons capacity

The Engineer reports in his No 1161 dated 22nd February 1943 that on an average 81,000 gallons of water per day is being consumed in Tiptur which has a population of 7,000 thus working out to 10 gallons per head per day. In his opinion one elevated tank with a capacity of one lakh gallons of water would mean a day's reserve stor recommend firstly the cost at the present time, and secondly what is required for this town is a balancing tank and not a storage tank there is already an existing pressed steel tank of 24,000 gallons capacity another tank of 50,000 gallons capacity in a suitable place would be quite sufficient for the present but on account of the non-availability of cement, steel, and pressed steel tanks, the Sanitary Engineer suggests the postponement of the matter for the present. I agree with his opinion. A copy of his letter on the

* Letter No 1161 dated 22-3-43 from the Sanitary Engineer, Bangalore to the Director of Public Health Mysore, Bangalore

Providing an elevated tank one lakh gallons capacity for Tiptur town - representation made by several Municipalities to His Highness during his tour in Malnad, Chitaldrug & other Districts

In continuation of this office No 952 dated 9th January 1943 regarding the above submitting a note on the state of pendency of the several subjects referring to this Department and with reference to the representation of the Municipal Council, Tiptur that an elevated tank of one lakh gallons capacity is needed for their town water supply, I have the honour to state as follows -

The population of Tiptur town is 7,500 and on an average about 31,000 gallons of water per day is being consumed This works out to more than 10 gallons per head per day The installation of an overhead tank with a capacity of lakh of gallons would mean a day's reserve storage, which is not recommended strictly because of the abnormal cost at the present time and secondly not required for this town as a balancing tank and not a storage tank

There is already an existing pressed steel tank of 21,000 gallons capacity Another tank of 50,000 gallons capacity in a suitable place would be quite sufficient for the present but since pressed steel tanks are not available and an R C C tank would cost about Rs 20,000/- and even for this, necessary cement and steel is not available, as such, it seems desirable to postpone this for the present

Letter No C172-87 dt 24 4 63 from the Dy H
today a copy of his letter Dated 2-3-63 on
the subject

A Storage tank of a Capacity of 1,00,000 gallons
for the Tiptur water Supply Works is stated to be
unnecessary What is required is a balancing
tank of a Capacity of 50,000 gallons only as one is already
in Capacity of 24,000 gallons. But
even this work cannot be taken up on
due to non availability of Cement etc
on very high prices obtaining now. Hence
the Dy H and the Sanitary Engr have
recommended that the work may be deferred.
The proposal is sent for orders
in the Circumstances explained by the Dy H
Tah M 14/5 in his letter dt 18/3/63

One of the request made by the Tiptur
Town Md on their address to W-H. the
Minister during his visit in July 1962
was that the water supply at the place
may be improved by constructing an
overhead tank of a suitable gallons
Capacity It is now reported that what is
required is a balancing tank of a Capacity
of 50,000 gallons only and that the work
Cannot be taken up now, owing to prohibitive
cost and dearth of the required materials
like Cements Steel etc Thus though
